Problem Statement 2: Intelligent Life Insurance Needs Finder & Digital Advisory Platform

Problem Statement

Navigating life insurance purchases is often overwhelming for retail banking customers due to complex financial jargon, manual coverage estimation, and a lack of personalized guidance. This leads to high drop-off rates and low digital sales conversion for insurance providers. BFSI institutions need an end-to-end digital advice platform that replaces static sales funnels with an intelligent needs-assessment engine—one that calculates precise coverage requirements, matches users to tailored life insurance products, and provides interactive advisory features to complete the purchase journey seamlessly.

Student Goal

Develop an interactive customer-facing web or mobile platform that captures user financial parameters, runs automated algorithms to calculate their exact life insurance needs (such as Human Life Value or Net Needs Approach), recommends appropriate insurance products based on profile matching, and offers integrated digital advice capabilities (such as policy customization, scenario modeling, and specialist consultation booking).

Expected Outcome

Financial Needs Calculation Engine: A functional backend algorithm that accurately evaluates user inputs (Age, Annual Income, Dependents, Outstanding Liabilities, Future Goals) to recommend an optimal life cover sum.

Algorithmic Recommendation Engine: A dynamic decision engine that maps calculated coverage gaps, budget constraints, and risk profiles to specific insurance product types (e.g., Term Life, Whole Life, Endowment, ULIPs).

Interactive Frontend Journey: A responsive digital interface (Web, App, or Streamlit application) leading users through a seamless four-stage experience:

1. *Assessment Questionnaire / Profile Inputs*
2. *Calculated Coverage Recommendation & Visual Breakdown*
3. *Product Selection & Interactive Benefit Tweaking (slider adjustments for premiums/tenure)*
4. *Digital Advisory Module (a simulated video/chat consultation scheduler with a financial advisor)*
